Perkütan nefrestomi ve her türlü girişimsel işlemler esnasında kullanılır.

Elmas uçludur.

0,035 ve 0,038 inç kılavuz tellerle uyumludur.

Giriş esnasında santimetre ölçekleri sayesinde derinlik kontrol edilebilir.

Skopi esnasında yüksek oranda görüntü sağlar.

Used for percutaneous nephrostomy and all kinds of interventional procedures.

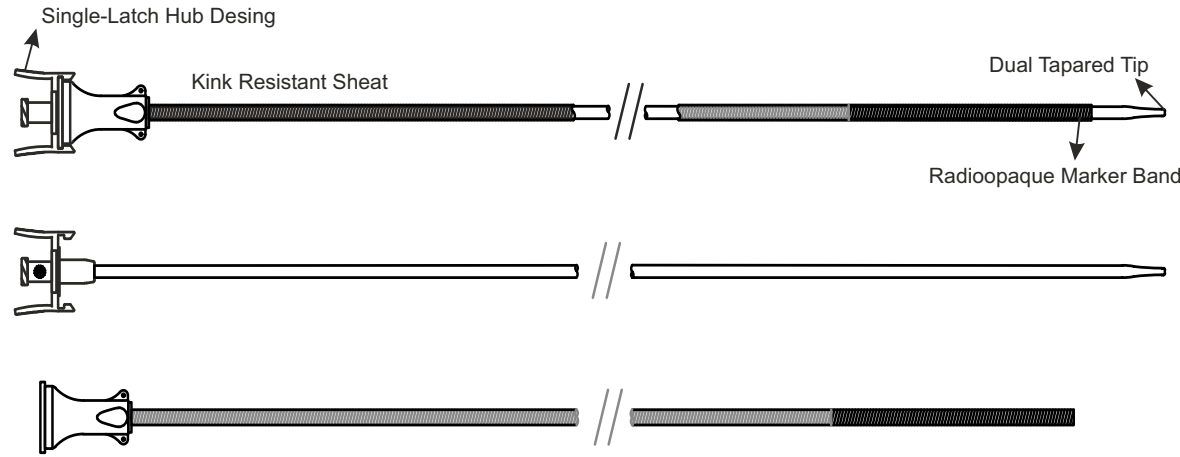

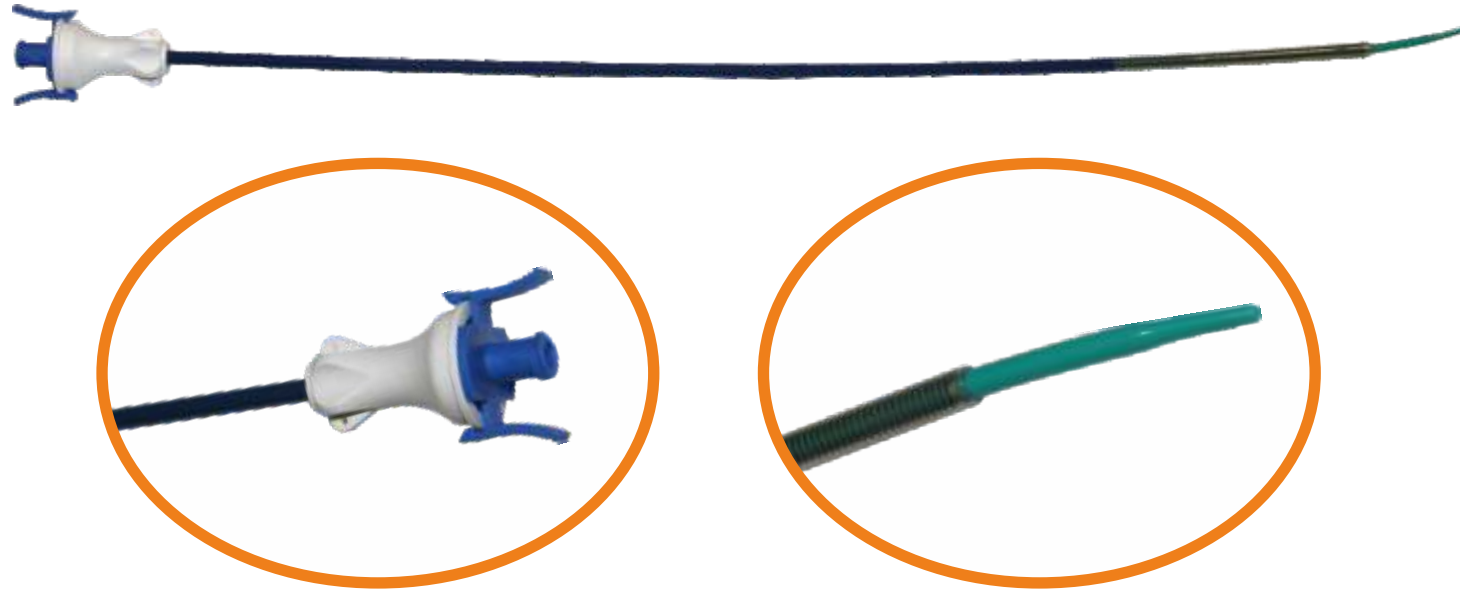

Diamond tipped.

Compatible with 0,035- and 0,038-inch guide wires.

Allows for depth control at entry thanks to centimeter scales.

Provides high level of image during -scopy.

Çift konik uçlu ve hidrofilik üreteral giriş kılıfı, endoskopik girişlerde operasyon bölgesinde tekrarlanan giriş ve çıkışları kolaylaştırır. Böbrek içi drenajı artırarak ve internal basıncı düşürerek bu sayede kolay ve rahat bir çalışma kanalı oluşturmak için kullanılır.

Double tapered hydrophilic ureteral access sheath facilitates repeated entry and removals in the operation site during endoscopic entries. This product is used to provide a simple and convenient operational canal by improving the intrarenal drainage and decreasing the internal pressure.

Basket kataterler üriner sistemden taş ve yabancı cisim çıkarmak için kullanılmaktadır. Ergonomik Handle'ı sayesinde tek elle manipülasyonu sağlar, kullanımı kolaydır. Basketin nitinol hafızalı yapısı bükülmeye ve kink olmaya karşı daha fazla direnç gösterir. Düğümlü basket ucu sayesinde böbrek duvarına yakın güvenli taş yakalama imkanı sağlar. Kullanım ihtiyaçları doğrultusunda farklı ölçülerde ve steril paketlerde sunulmaktadır.

Basket catheters are used to remove the stones and foreign bodies from the urinary system. Ergonomic handle allows easy use and single-hand manipulation. Nitinol memory structure of the basket provides greater bending and kinking resistance. The knotted basket tip allows for safe capturing of stones close to the renal wall. Available in various sizes and sterile packages for your needs.

[illegible]

Katater, üreterde atravmatik bir pasaj oluşturmak için dizayn edilmiştir.

Lümenlerden biri kılavuz teli uygulamak ,diğeri madde enjeksiyonu uygulamak için kullanılmaktadır.

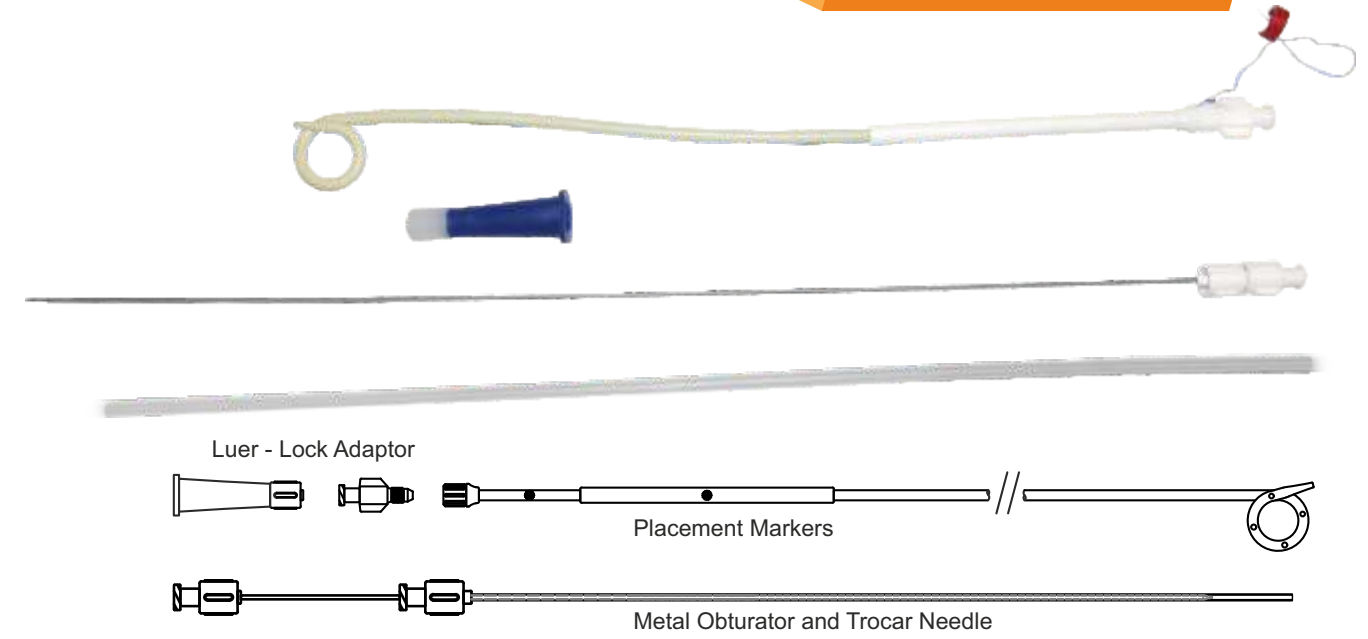

Fleksi tip poliüreten'den imal edilmiş olup steril ve tek kullanımlık paketlerde sunulmaktadır.

Catheter is design to provide an atraumatic passage in the ureter.

One of the lumens is used to apply the guide wire, and other one is used to administer the agent injection.

Made of flexible polyurethane available in sterile single use packages.

Nitinol üzerine hidrofilik kaplı poliüretan malzemeden üretilmiş olup manipülasyon sırasında sıyrılmalara ve kırılmalara karşı dirençlidir. Tüm skoplarla uyumlu olup büküldüğünde tekrar şeklini bulan form hafızalı. Zor anatomilerden kolaylıkla geçer.

Resistant to stripping and breaking during manipulations thanks to its polyurethane material coated with hydrophilic on nitinol. Compatible with all scopes featuring form memory for restoring its shape when bended. Easily inserted in challenging anatomies.
